Update 7/19/2021: Windows 8.1 is long outdated, but technically supported through 2023. If you need to download an ISO to reinstall the full version of the operating system, you can download one from Microsoft here.If you are still using Microsoft Windows 8.1, we recommend you at least begin considering what OS you will use in the future. It's mid-2021 and Win 8.1 will shuffle off the mortal coil in January 2023. You can still qualify for a free upgrade to Windows 10 if you own a valid Windows 8.1 license, despite the fact that Microsoft formally ended its upgrade program five years ago. Additionally, Windows 10 has the same system requirements as Windows 8.1, so if you can run the latter, you can also run the former.Even though Windows 11 has been announced, upgrading to Windows 10 has several advantages. First, Windows 11 may not support your hardware if it's old enough to still be running Windows 8 or Windows 8.1. Windows 10, on the other hand, was compatible with virtually everything Windows 8.1 would run on. Windows 10 will also be supported through 2025, which gives you an extra two full years of support before needing to figure out an alternative solution.If you are somehow still stuck on Windows 8.0 and do not want to go to the hassle of a full OS swap, we recommend running Windows Update immediately and downloading all available patches for your system, including the Windows 8.1 update, which will likely be offered to you by default. If you want to download just the Windows 8.1 update files, you can do so here.Original story below, from 2013:Windows 8.1 has been released. If you're using Windows 8, upgrading to Windows 8.1 is both easy and free. If you're using another operating system (Windows 7, Windows XP, OS X), you can either buy a boxed version (\$120 for normal, \$200 for Windows 8.1 Pro), or opt for one of the free methods listed below. To download and install Windows 8.1 for free, follow the guide below.How to download Windows 8.1 for freeIf you don't want to wait for October 17 or 18, there are two options for downloading Windows 8.1: You can obtain a copy (and a license key) from a friend/colleague with an MSDN, TechNet, or DreamSpark (student) subscription, or you can download a Windows 8.1 RTM ISO from your favorite file-sharing website (The Pirate Bay, Mega, etc.)While we're not going to write a guide on how to obtain Windows 8.1 RTM from non-official sources, we will at least tell you to check the SHA-1 hash of the ISO that you download to make sure that it's legitimate. If you hit up the MSDN Subscriber Downloads page, and then click Details under the version that you've obtained from elsewhere, you'll find the SHA-1 hash. If you then use File Checksum Integrity Verifier (FCIV) on the ISO, the hash should match. If it doesn't, assume the ISO has been compromised and download another. (But do make sure that you're checking the right SHA-1 hash on the MSDN website; your ISO might be mislabeled.)The other easier, and completely legal, option is to download the Windows 8.1 Preview from Microsoft. It's not as snappy as the final (RTM/GA) build, though, and has quite a few bugs/missing features. Bear in mind that if you go down this road, upgrading to a real version of Windows 8.1 will require a few more steps (discussed in the next section).How to install Windows 8.1 for freeOnce you have the Windows 8.1 ISO on your hard drive, the installation process is painless. Before you begin, you should consider backing up your important files and documents, but it's not really necessary. You should also ensure that you have plenty of free hard drive space (20GB+).If you're already running Windows 8 and you downloaded the RTM ISO from somewhere other than the Windows Store, you can install Windows 8.1 by mounting the downloaded ISO in Explorer by double-clicking it, and then running the installer. If you're on Windows 7, XP, or (bless your soul) Vista, you'll need to burn the ISO to a USB thumb drive or DVD, or mount the ISO using a third-party virtual drive tool, like Magic ISO.If you already have Windows 8, and you waited for the official release date, installing Windows 8.1 is as simple as visiting the Windows Store and downloading the free update.In both these cases, the upgrade process should be very smooth, with your apps and settings fully preserved. If you upgrade from Windows 8.1 Preview, however, you will lose your installed apps, unless you first run a cversion.ini removal utility.Once you've installed Windows 8.1, you should check out our extensive collection of Windows 8.1 tips and tricks, and be sure to check our Windows 8.1 review and hands-on impressions to ensure that you're making the most of all the new features.Now Read:Sebastian Anthony wrote the original version of this article. First revealed at June's WWDC event, iPadOS is officially available today (Sept. 24) alongside iOS 13.1.Marquee features in iPadOS include a version of Safari that's closer to the desktop version than ever before, new multitasking tools such as the stack of slide-over apps and the justifiably hidden mouse support for the iPad. Check out my full iPadOS review to find out more.Here are our instructions for how to download iOS 13.Should I download iPadOS?My answer for most people is Yes. Major new versions of operating systems carry a bit of hazard, with app compatibility being a risk. So, if your iPad is the machine you rely on to do your work that you make a living on, reconsider. Also, if you're excited about Sidecar, the feature that links your iPad and Mac, you'll want to wait until macOS Catalina's final version in October (as it won't work on macOS Mojave).Which iPads support iPadOS?Apple's giving iPadOS to a pretty wide range of iPads, dating as far back as 2014's iPad mini 4. The full list is below. We tried it out on the 11-inch iPad Pro (2018) and the 12.9-inch iPad Pro (2017).Back up your iPad before installing iPadOSIn case anything goes wrong during your update, you'll want to make sure you have an iPad backup to restore from. The fastest way to back up your iPad is via iCloud on the tablet itself.1. Click Settings.2. Click iCloud (under your user section).3. Turn on iCloud Backup.You can back up to iTunes (or Finder if you're already on Catalina) by connecting your iPad to your Mac via a USB-C or Lightning cable. Then open iTunes (or Finder), click on the device icon, click Summary, select This Computer under Backups (as opposed to iCloud) and then click Back Up Now. How to Install iPadOS1. Tap the Settings app.2. Select General.3. Select Software Update.4. iPadOS should appear here. Tap Download & Install.5. You'll be prompted to enter your passcode and then you'll need to agree to Apple's terms and conditions.From there, the iPad update will start downloading. When it's time to install, your phone will restart. The installation process could take a while, so be patient.iPad Buying Guide: iPad vs iPad Air vs iPad Pro vs iPad mini
